

Food Logistics

2019 Educational Webinar Series

STAY ON TOP OF THE LATEST TRENDS AND BEST PRACTICES IN THE GLOBAL FOOD AND BEVERAGE SUPPLY CHAIN.

April 24 Blockchain & IoT

The impact of transformational technologies such as blockchain and IoT on the global food supply chain is beginning to reveal itself in a variety of areas, including tracking and tracing of products and assets as well as verifying the integrity of data and streamlining the flow of information. What are the immediate and affordable ways these technologies can be applied today? Join an expert panel as they discuss the merits of blockchain and IoT as they apply to the global food supply chain.

May 22 Creating an Integrated Global Cold Chain

A truly integrated cold chain facilitates the seamless movement of product and data among all stakeholders in the food supply chain—from food growers and manufacturers, to transportation partners, ports, cold storage providers and others who collectively ensure food safety and freshness. What investments and innovations are making the most impact across the global cold chain? A panel of industry executives examines this topic from several angles.

June 12 Automated Warehouse Solutions

The e-commerce explosion is a main driver for the food and beverage industries' embrace of warehouse automation and the benefits that come with it, such as gains in productivity and accuracy, safety, and improved shelf life and inventory control. What types of warehouse automation are making the most impact? How can organizations determine the right investments for their needs? These are some of the topics that will be explored by a panel of industry experts.

August 21 Smart Investments: Choosing the Right Software & Technology

From farm to fork, software and technology touches virtually every aspect of the global food supply chain, helping to assure compliance with multiple regulations, manage the proliferation of SKUs, and enhance overall supply chain visibility. Join industry executives as they discuss how software and technology is impacting the global food supply chain and what investments your organization should consider and why.

September 18 Cold Chain's Hot Innovations

Improving energy efficiency. Reducing food waste. Assuring compliance with the FSMA. These are some of the requirements that retailers, restaurants, manufacturers and growers of perishable food are demanding of their logistics partners when it comes to maintaining the cold chain. In response, innovations related to equipment, temperature monitoring devices, refrigeration systems and other new products and services are helping meet these demands.

October 16 Adapting to Change: Software & Technology

Join an expert industry panel to discuss how the fast moving software and technology sector is adapting to the changes—and pressures—underway in the global food supply chain. Specifically, new and affordable tools are needed to improve performance, mitigate risk, boost food safety, facilitate visibility and collaboration, and lessen the ongoing impact of a tight labor market.

November 6 The Changing Face of 3PLs

The role of third-party logistics providers in today's global food supply chain is expanding to meet growing demands from their customers, which range from compliance, to improved cold chain capabilities, access to software and technology, and more. At the same time, customers expect their logistics providers to maintain tight control over costs. How are 3PLs navigating this evolving market while remaining competitive? Join a panel of logistics executives in a discussion of these topics.

December 11 Hottest Food Supply Chain Trends Coming in 2020

Our annual "Hottest Food Logistics Trends" educational webinar is one of the most popular each year, bringing together various food logistics executives to weigh in on the hottest trends shaping up for the coming year and what they portend for the industry at large.
